§4 – Ontwerpaspecten

• Ontwerp in drie lagen:

```
public class CDMapper {
 private PreparedStatement selectCdsStatement = null;
 private PreparedStatement selectTracksStatement = null;
 private Connection connection = null;
 public CDMapper() throws CDException {
  initConnection(); // Maak verbinding
  initStatements(); // Prepareer statements
                                                       Open Universiteit
                                                                   www.ou.nl
```

```
private void initConnection() throws CDException {
 try {
  Class.forName(DBConst.DRIVERNAAM); // CNFException?
  connection = DriverManager.getConnection(
   DBConst.URL.
   DBConst.GEBRUIKERSNAAM,
   DBConst.WACHTWOORD); // SQLException?
 catch (ClassNotFoundException e) {
  throw new CDException("Driver niet geladen");
 catch (SQLException e) {
  throw new CDException("Verbinden mislukt");
}}
                                                   Open Universiteit
                                                              www.ou.nl
```

```
private void initStatements() throws CDException {
 try {
  selectCdsStatement = connection.prepareStatement(
   "SELECT * FROM CD");
  selectTracksStatement = connection.prepareStatement(
   "SELECT * FROM Track WHERE cd = ?");
 catch (SQLException e) {
  closeConnection(); // Nu eerst verbinding sluiten!
  throw new CDException("Fout bij het formuleren van SQL opdracht");
}}
```

```
public List<CD> leesAlleCDs() throws CDException {
  List<CD> cds = new ArrayList<CD>();
  try {
   ResultSet res = selectCdsStatement.executeQuery();
   while (res.next()) {
     String code = res.getString("code");
     String titel = res.getString("titel");
     String label = res.getString("label");
     int jaar = res.getInt("jaar");
     String genre = res.getString("genre");
     cds.add(new CD(code, titel, label, jaar, genre));
   return cds:
  } catch (SQLException e) {
   throw new CDException("Fout bij inlezen van CD's");
} }
```
